VARIETY OF GERANIUM NAMED 'PENDEC'

BACKGROUND OF THE INVENTION

This discovery relates to a new and distinct cultivar of *Pelargonium x peltatum* known by the varietal name of 'Pendec.' The seedling from the present variety is a spontaneous mutation of 'Pendresd' (patent pending). The new variety was discovered in France on June 22, 1996. The new variety was first asexually reproduced by cuttings at Elsner pac Jungpflanzen in Dresden, Germany on October 15, 1996. It has been found to retain its distinctive characteristics through successive propagations.

The new cultivar has similar flower color and form to 'Pendresd' but is a shorter internode length and has yellower stems than 'Pendresd.'

The cultivar, when grown in a glass greenhouse at high humidity using natural light and 18°C night and 20°C day, has a response time of ten weeks from a rooted cutting to flowering in a 10 cm pot. The response time was determined on plants grown in peat substrates.

DESCRIPTION OF THE DRAWING

The accompanying photographic drawing illustrates the new variety, with the color being as nearly true as is possible with color illustrations of this type.

DESCRIPTION OF THE PLANT

The following detailed descriptions set forth the characteristics of the new variety. The data which define these characteristics were collected from asexual reproductions carried out at Elsner pac Jungpflanzen, Kipsdorfer Strasse 146, D-01279, Dresden, Germany. The color readings were taken in natural light. Color references are primarily to the Royal Horticultural Society Colour Chart.

Figure 1 displays the effect of the 1997 Asian financial crisis on the relationship between the real exchange rate and the current account for Japan, Korea, and Taiwan. The figure is organized into a 4x3 grid of subplots. The top row shows the 'Current account' for Japan, Korea, and Taiwan. The middle row shows the 'Real exchange rate' for Japan, Korea, and Taiwan. The bottom row shows the 'Real exchange rate' for Japan, Korea, and Taiwan. Each subplot contains a line graph with a shaded area representing the confidence interval. The x-axis represents time from 1990 to 2000. The y-axis represents the current account or real exchange rate. The legend indicates that the solid line represents the 'Estimated relationship' and the shaded area represents the 'Confidence interval'. The data shows a significant change in the relationship around 1997, with the current account becoming more sensitive to the real exchange rate after the crisis.
